

DATA. POWERFUL, BUT SLIPPERY.

Certainty on your digital transformation journey.

Your successful digital transformation depends on
the seamless handling of your data. Moving it easily.
Storing it efficiently. Keeping it secure at all times.

Certainty on your digital transformation journey.

Decisive Group's infrastructure and cloud specialists understand real-world business needs—clarity, control, time, and confidence—and how to help customers attain them through purpose-built solutions.

We design, build, and maintain enterprise IT infrastructure and hybrid cloud, as well as managing and protecting data.

We bring clarity to infrastructure planning.

To ensure your network is a precise fit for your needs, we dig deep into your requirements to develop a plan to meet your needs today and scale seamlessly into the future. Our vendor-neutral architecture planning services transform legacy infrastructures into dynamic environments, using the best hardware, software, and networking technology. The result is exceptional virtualization, storage, and computing architectures that improve operations and increase business efficiencies.

It begins with great planning, and follows through with ongoing analysis, ensuring you have the performance you need, at the price you want, across your on-premises and cloud environments. We work in the real world—where cost is not some abstract consideration that takes a backseat to performance. All Decisive-designed infrastructure is cost-optimized and tailored to ensure it matches our client's financial model, relating to:

- Capital expenditures
- Operating expenses
- Support charges
- Maintenance costs

It's all part of our comprehensive approach to align your total cost of ownership with your budget planning and expectations, giving you the flexibility to customize models to fit your business requirements.

Our approach to infrastructure deployment and integration simplifies the process of building beyond your legacy system. We ensure the integrity and availability of your data, wherever your network reaches. Whether you choose to co-locate owned hardware, secure a fixed resource pool, leverage a utilization-based model, or anything in between, Decisive can expand your infrastructure—managing the planning, logistics, and implementation so you never miss a beat.

Our vendor-neutral approach lets you avoid the limitations of one-size-fits-all options by planning with the best technologies available, allowing you to harness proven hardware, software, and networking technologies from the world's leading manufacturers, whether your data lives on-premises, in a hyperscale cloud, or the Decisive Cloud.

We give you control of your data.

Active, passive, unstructured—whatever form your data is in, you need to back it up efficiently, move it securely, and access it effortlessly. Wherever and whenever you need it, having trust in the integrity of your data and its protection strategy and serving it up when required is essential.

Decisive leverages the fastest and most advanced data protection technologies to deliver maximum reliability and mitigate against data loss. Our customized data protection solutions provide both exceptional, flexible protection, as well as a price tag that won't derail the rest of your infrastructure plan. We can design a protection strategy to leverage the best third-party software combined with your hardware, hyperscale, or the Decisive Cloud—giving you the peace of mind that there won't be any hidden costs.

The Decisive Cloud can deliver an easy to use, cost-effective solution to extend your storage capabilities, with a highly available, independent, Canadian-sovereign, offsite cloud storage target. It all adds up to scale-out storage that blends co-location and utilization-based models, with simple, transparent pricing. What's more, we apply our years of experience and deep expertise to set up, monitor, and manage your data protection strategy—giving you confidence that your data will be safe and meet regulatory compliance requirements.

We give you time back by taking on your IT environment.

Decisive puts in the time to help implement and maintain your purpose-built IT environment, so you can get on with business. Our engagement begins with a deep dive into your technical requirements, an analysis of the workloads you run (or plan to run), and a conceptual design of your solution architecture. From there, we work closely with your team on issues like installation, configuration, and integration, and then migrate your data to your new environment.

Once deployment is complete, we test and validate to ensure your environment is performing at peak efficiency, and we provide 24/7 monitoring to ensure it stays that way. Wherever your workloads are going to live, we can help you install, provision, and configure the infrastructure and software you need. Our exceptional depth of experience lets us streamline your deployment and integration process, ensuring a seamless migration

— Powered by best-of-breed technologies, our cybersecurity platform provides you with complete system visibility.

We give you confidence with our cybersecurity vigilance.

Identifying the flaws in your data environment before an attacker can take advantage of them—and then staying vigilant for suspicious activity—are critical steps in being proactive in your approach to cybersecurity. Skip those steps, and you're inviting trouble.

Working as a natural extension of your team, Decisive helps you identify the long-term risks and put the necessary safeguards in place before an incursion occurs. Our commitment to you includes using our proven depth of knowledge and experience to custom-design technology and operational processes. Then, we constantly iterate to make your cybersecurity posture and threat response strategy the best it can be.

We reduce the potential impact of threats to your network by applying our deep understanding of the power of active security monitoring and tailored solutions to decrease time to action. As a powerful enabler of proactive cybersecurity, we can level the field between organizations with extensive, internal cybersecurity teams and those with fewer resources.

Our comprehensive cybersecurity solution gives you:

- The experts you need to protect your networks
- A solution custom-tailored to your business
- 24/7 monitoring for real-time threat assessment and triage

Powered by best-of-breed technologies, our cybersecurity platform provides you with complete system visibility—of network users, applications, and infrastructure—providing log aggregation, normalization, and correlation to ensure you're proactive. And, above all, secure.

Some security monitoring solutions provide inadequate threat-surface coverage and lack proactive detection. Our tailored approach gives you a single point of integration for all logging activity, flexibility in deployment, active monitoring tuned to your specific environment, and triaged escalations of potential security incidents.

If you lack the internal security operations centre resources to proactively tackle cybersecurity head-on, we can provide the skilled personnel to increase your ability to effectively correlate data and identify potential trouble. Our team is composed of highly experienced, next-generation cybersecurity architects and analysts who have seen the traditional approach to reactive, set-and-forget defence. They wanted to work smarter, so they work with us.

That's Decisive: A 100-percent Canadian operation, staffed with dedicated cybersecurity evangelists who have Government of Canada "Secret" clearance. They're there for you 24/7 to provide a redundant operational model and an effective threat-response escalation path structure.

Enterprise IT. Customized for you.

Decisive Group designs, builds, and maintains enterprise IT infrastructure and hybrid cloud, as well as managing and protecting data.

We engage with customers through our hands-on approach, providing guidance and highly personalized service. Solutions-driven, we partner with the world's leading providers of standards-based hardware, software, networking, security, and cloud products with one aim: to optimize processes and improve outcomes for medium and large enterprises.

In 2001, Decisive Technologies was founded as a professional services company in Canada's National Capital Region, and we began offering data centre solutions in 2010. We expanded our offerings in 2013 with the addition of BriteSky Technologies, which originally focused on cloud storage, and in 2021, the companies amalgamated their products and services under the Decisive Group banner.
