

Decisive Group Inc. Systems Engineering Lab:

Securely stage, test, and verify your new solution

Decisive Group understands that the sales process doesn't end when your solution, and any associated hardware, is ready for you. Our Systems Engineering Lab enables you to fully stage your equipment, train your staff, test and verify the interoperability of your new build, and demo your solution.

Decisive has continually invested in our lab for use by both clients and systems integrators. In this 600-square-foot space we can execute a wide range of activities that will ensure your equipment is working as it should and your employees are completely familiar with it.

Situated adjacent to our controlled goods certified shipping/receiving area, our secured space includes 200 square feet of assembly space, 6 42RU racks, power and cooling, as well as whiteboards and workbenches.

DGI Systems Engineering Lab features

Staging of equipment prior to end-client delivery, in coordination with end-client and/or your systems integrator

- Includes the receiving of equipment directly from the manufacturer
- Unpackaging and installation in rack, including power and cabling
- Initial system configuration

Training

- Includes a fully equipped training area with tables, chairs, power and audio/visual equipment to support up to 16 people

Testing

- We are able to facilitate multi-vendor topologies to enable test and verification of system interoperability

Solution demonstrations

- Execution of business use cases on vendor platforms as "proof of concept" engagements
- Multi-tenant usage, including remote access and complete separation of systems
