

Enterprise Grade Security for Organizations of All Sizes

Managed Firewall

Reduce operational costs and enhance your overall security posture

Find Confidence in your Firewall: Decisive Can Help

Decisive is in the business of helping organizations with their firewall challenges. Migrating to new hardware, overhauling network design, aligning to best practices; yes we can help with that.

We'll gladly take on the ongoing management of your firewalls as well. Ensuring that vulnerabilities are patched quickly, and that the latest features and functionality from the vendor are put into practice.

Not all Deployments Are Created Equal

With the urgent requirement to protect businesses from cyber threats, the demand for cybersecurity expertise far exceeds the supply, leaving many organizations scrambling to find resources with the right skills to fulfill their needs. With skilled security resources becoming increasingly scarce, many cyber hardware and licensing purchases are providing inconsistent return on investment. Technologies which are critical elements of your cyber defence strategy are in many cases only as good as the configurations you put on them. Firewalls are one of the best examples of this. These technologies also require ongoing care and feeding to be sure that they are adapting to changes in your business and the threat landscape.

At Decisive Group we recognize this challenge, and have created our Managed Firewall Service to help organizations of all sizes overcome it. By leveraging our team of expert Cybersecurity Engineers and Analysts, you can be sure that your firewall is configured and managed ongoing against established best practices.

Who are our partners?

Recognizing that one size does not fit all when it comes to firewalls, Decisive has the ability to support multiple technologies.

Our Capabilities:

Professional Services:

- Firewall Sizing and **Architectural Roadmap Support**
- Cross Vendor and Same Vendor **Firewall Migrations**
- Network **Segmentation/Transformation** Assistance
- Configuration **Best Practice** Assessments
- **Greenfield Configuration** Build and Deploy

Managed Services:

- Specialized in the **support of Palo Alto and Fortinet Firewalls**
- **Health** and performance **monitoring**
- **Patching** and **Upgrades**
- **Change Management**
- Monthly **Reporting**
- Ongoing **Security Policy Tuning**
- Decisive Group Bastien Host for **Secure Management**
- 24x7x365 **Break/Fix** and **Emergency Change** functions
- **Support for compliance** requirements

Embrace the Importance of Data Resiliency

Decisive Group has you covered

One fundamental aspect of bolstering data resiliency is the strategic implementation of firewalls. Orchestrating network traffic through firewalls enables organizations to regulate the flow of data, ensuring that only authorized entities can access specific resources and services. This granular control not only fortifies the security posture but also allows for the seamless functioning of essential business operations. Additionally, firewalls contribute to the identification and mitigation of potential threats in real-time, offering a proactive defense mechanism against evolving cyber threats.

With the scarcity of skilled available security resources, it has become increasingly difficult to implement and maintain firewalls while achieving the intended return on investment. Recognizing this challenge, Decisive Group has built a proven firewall expertise and operational capability that it extends to its clients in the form of its Managed Firewall service.

— Effective performance is preceded by painstaking preparation.”
